Live Plants

No office is complete without plants. They bring life and colour to a workspace and create that all important first impression for visitors.

At Suresupplies we offer a comprehensive range of live and artificial plants that are good looking, easily maintained and come with our guarantee of quality.

Most of the live plants in this brochure will survive quite happily in the average office. A few do require good natural light but for most, if the light is good enough for staff to work in, then it is good enough for the plants. If it really is dark it would be worth considering artificial planting but if in doubt please do call us to talk through the scheme.

Your displays are delivered ready planted with watering systems and advice on caring for them.

Buying a plant from Suresupplies also gives you free access to our customer service team who will be on hand to help with any problems you ever have with the plants.

How to Look After Your Plants

Light

All plants prefer good natural light. Some like the Figs will only be happy if placed no further than 2 metres from a window but others will adapt to lower light levels topped up with artificial light. If a plant is not getting enough light it will either drop its leaves (as in the in Figs) or new growth will be pale green and spindly.

Water

Generally plants prefer to be underwatered rather than overwatered. If in doubt - don't water. It is much better to give the plants a drink and then let them dry out before watering again rather than a little and often

All our floor standing displays will have a watering system underneath the plant with a side filler tube. The tank will hold enough water to keep the plant happy for at least 3 weeks (longer in winter).

Pest & Diseases

These are fortunately very rare. The most likely pest is the Fungus Gnat (Fruit fly). This is a small, completely harmless fly that lives in the compost. It does not bite but it is attracted to the carbon dioxide around your face so it can become a nuisance. If you think you have a problem we can either send you a chemical drench or we can come and treat it for you.

Artificial Plants

Artificial plants come in many shapes and sizes and many degrees of quality.

You will undoubtedly be able to buy cheaper replica trees on line but you will not find better quality, more lifelike plants than these. We have chosen this range based on realism. Some of these are imported trees from the Far East and others are hand made by Master Craftsmen in the UK.

Built largely on real wood stems with fabric foliage they will give you the appearance of live plants without the need for light or water.

Our exterior range is designed to give you stylish displays without the complications associated with live exterior plants.

The plants will arrive ready arranged and planted with a bonded top dressing.

Regular light dusting is all that is needed.
